White Flyer Targets . . . Scored for Higher Scores. First choice of gun clubs and individual sportsmen everywhere, world-renowned White Flyer Targets give added quality and performance, without added cost. Divided into 16 segments by score marks (an exclusive Western feature), White Flyers shatter easily when hit by just a few pellets. Colors to contrast with your terrain are available.

TRAP and SKEET EQUIPMENT

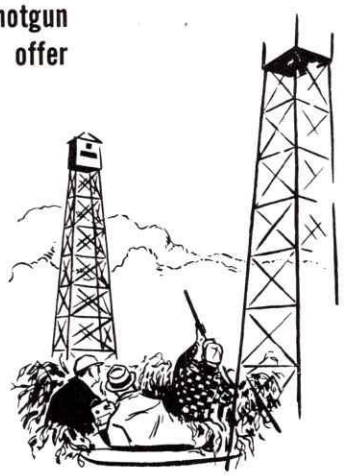
HIGH TOWERS FOR "DUCKSKEET" and other SHOTGUN GAMES

Looking for something new and different? There are a variety of shotgun games approximating actual field hunting conditions and they offer effective off-season practice.

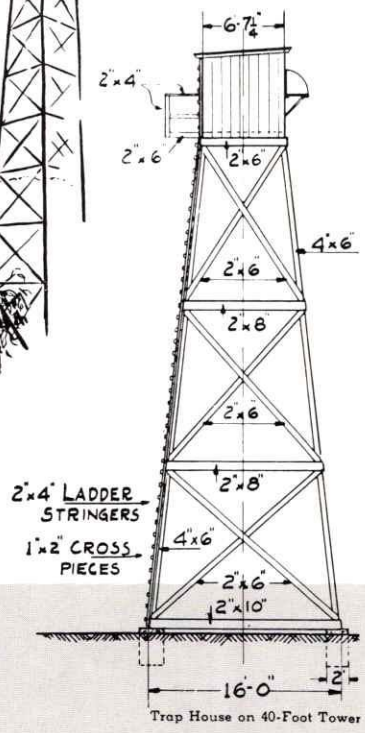
The Duck Tower is a challenging game because every shot is different; it is informal; it has the element of surprise. You do not know when the target will shoot out from a trap 40 feet in the air nor in which direction it might fly. This calls for alertness every second plus a fast, smooth swing.

"Duckskeet" particularly appeals to sportsmen who want practice under conditions that simulate high flying ducks or geese. The trap, such as the self-loading electric regulation trap, is mounted in a trap house atop a 40 foot tower.

Shooting stands are usually regular duck blinds and may be placed in different areas for an even greater variety of shots. Incoming, outgoing, high and low, and crossing targets offer the shooter a challenging sport. For greatest variety of shots, two towers are usually built.

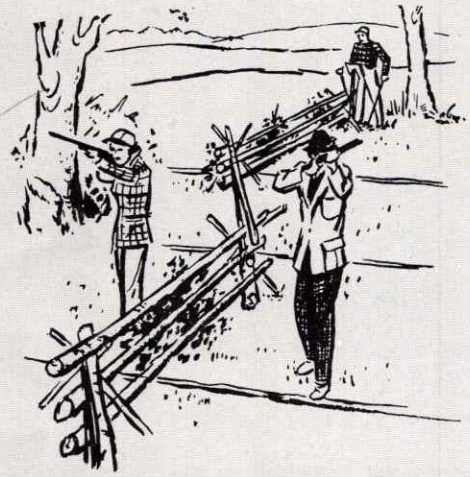


THE DUCK TOWER



Trap House on 40-Foot Tower

TRAP HOUSE

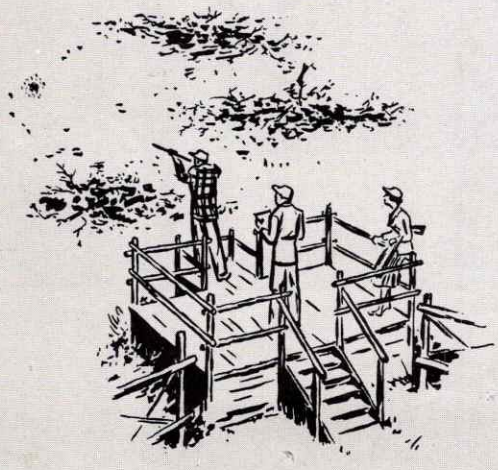


The Grouse Range

You and your hunting companion walk slowly on either side of a rail fence along true-to-life grouse cover. Out pops the target simulating the flight pattern of grouse. All targets move away from you just as a real grouse would. It sharpens your shooting on medium height fast-flying targets.

The Quail Walk

Gun in hand, you walk down a country lane, along typical quail cover — such as a rail fence, apple trees — when up springs a target. Singles, doubles and covey rises fly up for you and sail over the countryside. A real test of reaction, speed and, with a partner, hunting etiquette.



The Rabbit Run

Targets scoot out from under your feet just like a frightened cottontail. Flying just a few feet off the ground, these targets simulate the course of a running rabbit. Action is fast. You'll have to be quick to make a good score on these! Good practice for later hunting.

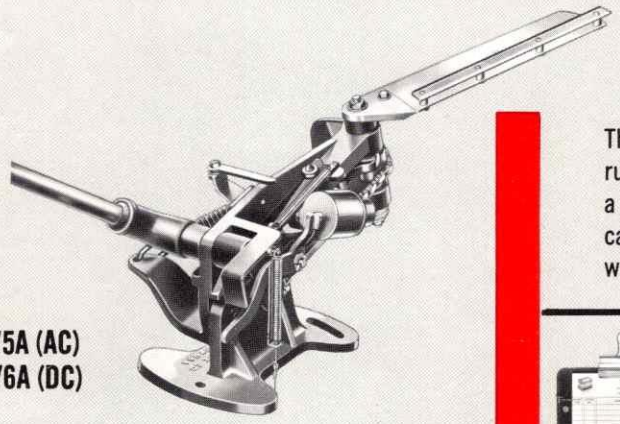
Self-Loading Electric Skeet Traps

Most modern Skeet Traps available, the Western Self-Loading Electric Skeet Traps provide the utmost in operational economy. One man, reloading between rounds, operates an entire field by himself. Each trap holds a reserve of 75 targets, more than enough for a full squad.

Streamlined. The ruggedness of aluminum and steel. Oilless bearings. Automatically clears itself of accidentally broken targets in magazine or carrier.

Precision release from target to target assures more uniform performance. The Western Portable Electric Skeet Release is both water proof and shock proof. The operator may follow the squad around the field in any kind of weather assuring that there are no missed calls. Master switch can be controlled by trap attendant for maximum safety.

SKEET



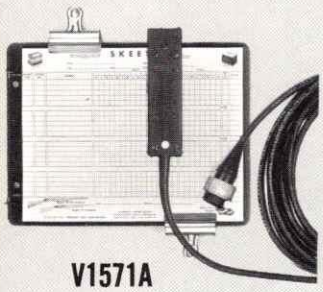
V1575A (AC)
V1576A (DC)

The **Western MASTER Electric Skeet Traps** are the answer to demands of skeet clubs for simplified and dependable equipment with the convenience of electric release.

An electric solenoid, mounted on the trap frame, gives positive releasing when you want it. Two wires to the scorer's table provide control. Complete unit includes two traps, with electric solenoids already mounted, release unit, all necessary wire and connections for 115 volt 60 cycle A.C. power — or 6 volt D.C. solenoids.

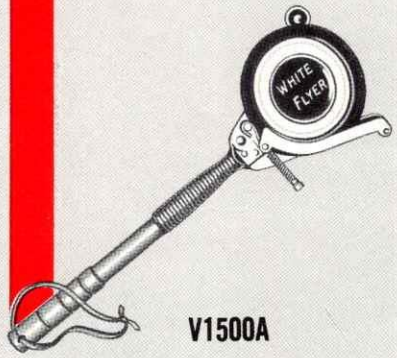
Western MASTER Skeet Traps deliver fast spinning targets that are easier to see and hit. Special type of carrier is an exclusive Western development that reduces friction and holds target breakage to a minimum.

The **Western MASTER non-electric Skeet Traps** are built with the same rugged dependability as the electric except that release is accomplished by a pull system of wires so simplified that even the most inexperienced puller can throw perfect doubles. Readjustment of pull wires is unnecessary even when changing trap elevation. **V1506A**



V1571A

Clipboard, release control head and wiring comprise the **Western Portable Electric Skeet Release.** May be plugged into the same connections on fields previously wired with the 3-wire system for the Instantaneous Electric Skeet Release. Also available complete with necessary field wiring and connections for new installations or converting fields with other than a 3-wire system.



V1500A

A gun, shells, targets and a **Western Hand Trap** are all you need for an afternoon of shooting fun. No limit to the variety of angles — slow and easy for beginners or fast flyers for experts . . . high over trees like ducks or skimming the grass like a scared rabbit. The same type of carrier as on the practice trap gives positive control and rapid rotation for easy to break targets. Left hand traps available on special order.

Self-Loading Electric Regulation Trap

Maximum convenience and optimum performance are yours with the Western Self-Loading Electric Regulation Trap. One man operation gives you the ultimate in operating economy and eliminates the inconvenience of waiting for trap boys. Once loaded, just a push of the button is all that is needed to throw the target, recock the trap and reload the throwing arm.

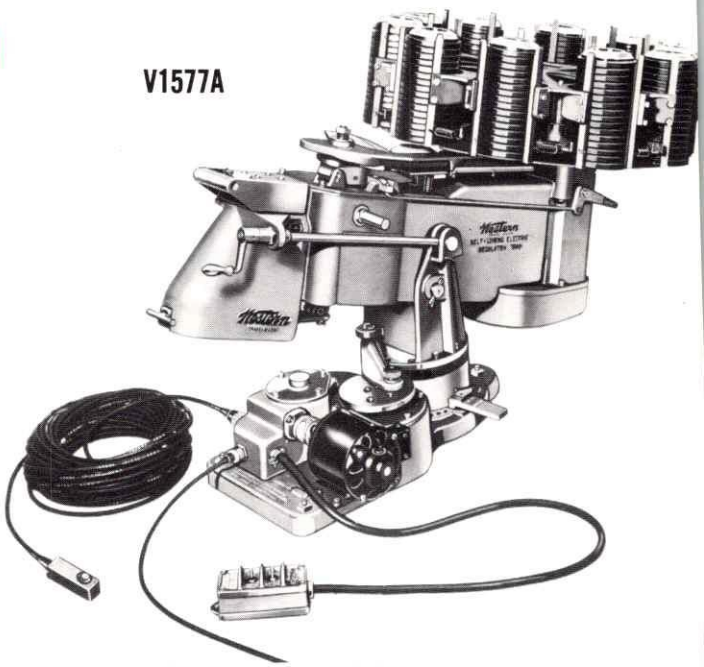
Immediate release and fast recovery enable this trap to keep up with the fastest squads. Target placement on the arm is mechanically precise assuring more uniform throws and less target breakage. Quick change-over from singles to doubles or vice-versa.

Easy, economical installation. No push-pull rods needed. Power and release cables plug into trap base and operate from 115 volt 60 cycle A.C. power source.

Rugged — no brake or belt tensions to adjust. Trap swivels on large adjustable ball bearing mechanism that runs in oil for long, reliable service. As trouble-free as a trap can be.

Safe — separate control unit, mounted outside trap house, provides maximum safety.

V1577A



TRAP

The **Self-Angling White Flyer Trap** is geared to trapshooting demands. Throws singles or doubles with precision. Angles change automatically; spread equally over the field. **V1517A**

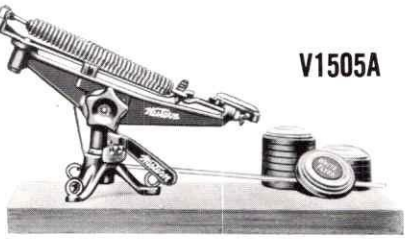
Standard White Flyer Trap offers same ruggedness but angles are changed manually. **V1515A**

Self-Angling Base Only
Self-Angling base available separately. Can easily be installed on any White Flyer Trap in good condition. **V1516A**

V1517A

The **Western McCrea Master Trap** is a high quality, truly economical trap, unbeatable for simplicity, sturdiness, and target throwing efficiency. Simple to install, easy to load and operate. **V1504A**

Lightweight, inexpensive, easily portable — the **Western Practice Trap** gives you shotgun practice wherever and whenever you want it. Bolts to a sturdy plank (not furnished) or in fixed location. Manual cocking, lanyard release. Instantly adjustable for angles and elevations from zero to 45 degrees.



V1505A

V1524A

Rapid fire push button release with minimum cost is provided by the **Western White Flyer Electric Trap.** At the 1960 Grand American, 44 of these traps threw 1,572,000 (18 truckloads) White Flyer Targets without a delay. Again in 1961, the same number of traps threw 1,450,500 White Flyer Targets without a single mechanical breakdown.

Easy, economical installation. No push-pull rods. Operates on 115 volt 60 cycle A.C. power source.

Simple hand adjustments for wind and elevation. Convenient master switch assures maximum safety. Trap automatically uncocks when power is shut off.
